

YELLOW JACKET® SAE Line Set Torque Wrench Heads

60653 5/8" and 13/16" heads for 60650 Torque Wrench Kit

Commonly requested 5/8" and 13/16" head sets for SAE size flare nuts are now available

Most mini-split manufactures refer to metric sizes regarding line sets and flare nut sizes in their literature. However, we have heard that on many occasions, most contractors will purchase US made line-sets with SAE size flare nuts.

The two most common sizes appear to be 1/4" and 3/8" line sets, which equates to 5/8" and 13/16" size flare nuts, respectively.

Copper Tubing OD	Metric Flare Nut Wrench Size	SAE Flare Nut Wrench Size
1/4"	17mm (not a proper fit)	5/8" (16mm)*
3/8"	22mm (not a proper fit)	13/16" (21mm)*
1/2"	24mm or 26mm (works with 1/2" line)	15/16" (23.8125mm)
5/8"	27mm or 29mm (works with 5/8" line)	1-1/16" (26.9875mm)

Per the chart above, the size heads that are missing from our current 60550 torque wrench kit are 5/8" (16mm) and 13/16 (21mm). These heads are now available as a separate kit under part number 60653.

*The heads are stamped with the metric size, however, they fit the SAE sizes accordingly.
