

# 1/4" Inline Filter Fitting

# YELLOW JACKET®

## Important Information:

1. This filter fitting prevents contaminants, copper shavings, carbon, and other foreign objects from making their way to the recovery machine and causing permanent damage.
2. The use of this filter is recommended for all modes of recovery.
3. Like a filter drier, this strainer **MUST** be cleaned or replaced often. Failure to do this can cause the strainer to become too clogged for refrigerant to flow freely. A sure sign that the straining device is clogged is the freezing of the suction port and the filter fitting.
4. **This fitting must only be attached to the intake or SUCTION port of the recovery machine as seen below.**

**IMPORTANT!!! Avoid placing this fitting on the DISCHARGE port as this will trap particulates within the recovery machine.**
