A2L Mini-Split Tool Kits: *Striving to offer complete A2L Solutions*

As the industry continues moving to A2L refrigerant equipment, YELLOW JACKET® will update application specific products for that equipment. Our A2L Mini-Split Tool Kits have been designed to take the guesswork out of tool selection for installing and servicing A2L refrigerant (R-32 and R454B) equipment; while not leaving out the large installed base of R-410A refrigerant equipment. Each kit includes an A2L manifold, PLUS II™ hoses, tube cutter, flaring tool, torque wrench, core removal tool and more to complete the job. All tools are safely kept in a tool bag. Choose from the standard (60995) or deluxe (60996) kits. We will continue to offer our standard mini-split tool kits (60993, 60994).

Product Specifications

Please see A2L Mini-Split Tool Kits Product Sheet P/N 10262. Go to <https://yellowjacket.com/product/mini-split-tool-kit/> for more information.
